EECS 448 Project 4

Group 2 Video script

Intro

- Person A: *spills water on notebook where they log moods* "Ugh shoot!"

- Person B: "What's the matter?"

- A: "Ah nothing, I just normally track my moods in my notebook but I just spilled my drink all over it… 😩"

- B: "Ohhh that's a bummer. Did you know there is an app for that?"

- A: "Really?"

- B: "Yes! I use this cool app called CIAN. I get to log my overall moods and more than that, it asks me questions about how my day is going. After I finish answering it gives me a cute little gif and the developers even let me give them feedback on whether or not I liked it. You should definitely check it out."

- A: "Wow I think you've sold me. It'll be nice to not have to carry my notebook around either."

- B: "Yeah, it's super convenient. If you need more info the developers have this video of them walking through the features. Check it out-"

  - * Person B shows Person A their phone and we cut to app walkthrough*

App

- Person 1: "Hi! We are EECS 448 Team 2 and today we are proud to present our Project 4 app we named CIAN. While we were still in the conceptual phase of the project, we knew we wanted to target people our age and began to materialize an app that would offer resources to college students depending on their stress levels. After further development, we decided to expand the

target audience from college students to a more general audience and to offer an easy-to-use interface with light-hearted content."

- Person 2: "Our app allows you to answer questions about your day, records the type of day you had on a monthly calendar, and returns a gif to hopefully at least bring a little happiness or comfort to the user. The app offers a personalized experience by prompting the user for login credentials and allowing them to change themes and to look back for a monthly view of their recorded moods."

- Person 3: "For our framework we chose to use React Native in combination with our object-oriented design paradigm to intertwine related elements, variables, and objects. The framework

----

- Person 4: "Now, we'd like to give you the walkthrough of the features. As you can see, the menu will allow you to navigate through the app without creating an account, but that is where we would encourage users to begin. By clicking on the Login button, new users are prompted to create an account while returning users can utilize their information to log back in. They are also given the option to return to the main menu if they decide not to make an account."

- Person 5: "After logging in the user can now choose the Start Button to begin answering questions that will help us determine how their day went and what reaction from us should be returned. The user is first asked how their mood was overall and then how they are feeling presently. Afterwards the user is asked to think abstractly to describe their day in a color. Finally, the user is prompted to reflect on any negative feelings for the day to answer the last question. Afterwards, CIAN will record the response and return a gif based on the user's input. The final feature of the Start Button allows the user to give the gif they received either a "Thumbs Up" or a "Thumbs Down"

- Person 1: "This is all that is required of the user and if they found their experience to be satisfactory, they can simply Log Out in the settings. However, if they feel their experience could be slightly improved aesthetically, the Change Theme button is also located inside the Settings. Change Theme allows the user to choose between 4 different animals (including a Jayhawk), and each animal's associated theme color. The user will find that their background and button colors throughout the app will be altered based on the theme of their choice. From here, we can return to Settings and log out, or take one more step back to return to CIAN's main menu."

- Person 2: "Next up we have the About Button. It is a simple feature that essentially provides CIAN's mission statement to give the user a little more insight into the developers plans for the app. From there, you can return to the menu to navigate to your History. A small map will be displayed within the History Button, and the user can watch as their month is filled with colors associated with the moods they felt day-to-day."

- Person 3: "Finally, if the user doesn't feel like creating an account, or answering questions, or just wants some additionally content, they are given the option to get "Straight to the Funny Stuff" which encompasses CIAN's final feature. This feature returns a gif where the user is unprompted by questions and still allows them to give feedback."

- Person 4: "This concludes the walkthrough of CIAN's features. We hope to provide a convenient and easy-to-use app for use across a broad span of ages. At our core, CIAN believes in feedback- on our content, on your day, and on our app so don't be afraid to reach out with comments or critiques."

- Person 5: "We would like to thank you for your time and consideration regarding the use of our app. We hope that you enjoy CIAN and that its features will improve your life so we can record plenty of good days for you."
  - End of description

Conclusion

- o *back to Person A and Person B from intro*

- Person B: "So what did you think?"

- Person A: "I'm glad you recommended it! It's already downloading. 😊"

  - o *both thumbs up or something lol*

    - ▪ THE END
